

## **Cash & Accounts Management**

---

Financial control is at the core of any operation. The powerful selection of tools provided with the ACE System further enhances our customers' ability to manage and monitor this vital part of their gaming business.

### **Cash Desk & Vault**

At the heart of cash management, ACE offers a cash desk & vault solution that is both simple to use, and feature rich. Our focus is in offering customers a secure and reliable solution to the handling of monetary transactions, ranging from simple cash in/cash out functionality, to a selection of fully configurable foreign exchange options, as well as support for dual-currency operations. Designed to work seamlessly with our reporting module, all transactions are recorded and available for analysis at any time.

### **Count**

In its essence, the ACE System count module allows for the full processing of all soft counts, both tables and slots. The seamless integration of this module allows for further verification of the count in a more productive, efficient environment. Given the sensitive nature of this work, security authorisations can be configured to the highest level, insuring your data is protected at all times.

### **Roaming Cashiers**

Roaming cashiers allow ACE customers to provide players with a convenient and secure solution to adding credit to their cards without having to leave their favourite machine. This feature is particularly valuable in those jurisdictions and operations where bill validators are not commonly implemented.

### **Card Charging Kiosks**

ACE offers its customers the opportunity to install card charging kiosks, providing a self-service solution for players to top up their cards. Card charging kiosks can be installed in convenient locations across the gaming floor and have a significant effect on cash desk productivity, especially at peak times.
