

Security

The ACE System has been designed with the understanding that security is of the upmost importance in any casino operation. Working with award-winning biometric security for over 15 years, we believe in implementing only the very best technologies to ensure our customers' data is protected to the highest standard.

Biometrics & User Authentication

Teaming up with industry leaders in biometric technologies, the ACE System allows operation managers to monitor every transaction and personnel access and/or authorisation in their venue. With no usernames and passwords, system users are authenticated using the latest fingerprint scanners, offering far more secure and accurate identification. At a staff level, the system is highly customisable, allowing for the the creation of multiple user groups and authorisation permissions. Whether it be limited module access, transaction limits or multi-user authorisation for high-value payouts, the system can be designed to work seamlessly within any operation.

Event Browser & CCTV

An invaluable tool for any surveillance team, ACE Systems event browser is a powerful, user-friendly application, monitoring all events pertaining to cash desk, vault, slots floor and tables, both historically and in real-time. A key feature of this application is the ability to customise event views and prioritise or flag events relative to their severity. For those operations with existing CCTV systems, event browser can be integrated and overlayed in real-time for review purposes, further enhancing security across all areas of your gaming floor.

Database & Card Encryption

All customer data, including cash balance, points and awards, is stored securely on the ACE System database, minimising the risk of data theft from a lost or stolen card. To prevent the use of fraudulent cards in your casino, ACE System cards use high level encryption specific to each venue, ensuring the integrity of your data is always protected.
