

## **Slots Management**

---

ACE System was the first in the world to introduce card-based play to the gaming industry. With its global deployment and the evolving demands of the market, the ACE system is both robust and adaptable. From old to new, ACE technology is able to connect to a wide range of slot machine protocols, whilst offering our customers a reliable solution that allows for player-tracking, as well as removing operational cost, not to mention the headache, of maintaining coin-handling on the gaming floor.

### ***Card-Based Play***

Our flagship technology, card-based play is the complete solution to a cashless gaming floor. With the use of advanced card encryption and the latest in database security, the ACE System will transform your operation to be both cost-efficient and fully manageable, whilst keeping your data secure. This solution has been designed to integrate perfectly with our reporting engine, allowing operators to see exactly what is happening on the floor at the click of a button. Such valuable information can be used alongside our many features, including V.I.P promotions, awards and jackpots.

### ***Ticket-Based Play***

A popular entry-level solution, our ticketing technology is a cost-effective and scalable way to enjoy some of the benefits of a cashless floor. The same high standards of encryption and security are applied across all ACE products, giving our customers the satisfaction of knowing their data is protected.

### ***Cardless Play***

Reduce downtime for new players with our simple solution that allows them to skip the queue at the cash desk and start enjoying your BV-connected slots floor immediately.

### ***Gaming Floor Network***

A key focus for the ACE system is the importance of minimising the risk of downtime. Our server-based, networked solution allows for the management of your entire slots floor from one central location, whilst also offering the latest in redundancy technology.
