

Table Management

At ACE Systems, we recognise the complexities of a fast-paced tables environment and have designed our table management technology to cope with such demands, whilst still providing feature-rich solutions. Our focus has been on developing efficient, scalable options, providing our customers' with a choice of products to best reflect their business needs. As a result, we are able to offer solutions ranging from basic operational functionality with our Pit Control Manager module to full player-tracking features and accurate statistical analysis engines with our complete Table Management System.

Pit Control Manager

Designed to be implemented at a central pit management terminal, this very popular module is the perfect entry-level solution. A simple and efficient way to open and close tables, record buy-ins, chip movement, average bets, manual player-tracking and more. Pit Control fully integrates with the ACE reporting engine, allowing for up-to-date revenue analysis and statistics.

Table Management System

Designed to effortlessly perform all the essential table accounting functions, as well as enhance game play with bonus features, including progressives, the ACE Table Management System is the premium solution for your operation. With an ergonomic touchscreen terminal at every table, this product allows for automated player-tracking as well as multiple user interface and is the ultimate tool for accurate transaction recording at all levels. Our secure biometric technology is implemented throughout, giving you full control over authorisation rights.

Table Progressives & Side Bets

Enhance the player experience from your table games with progressive jackpots, side bets and custom displays, all perfectly integrated with the ACE Table Management System.
